

Application State

This directory contains implemented features, functional prototypes, and deployed documentation.

Purpose

- House working implementations
- Store functional prototypes
- Maintain deployed documentation
- Preserve implementation examples

When to use Application State

- Functional code implementations
- Working prototypes
- Deployed documentation pages
- Implemented examples

Transition Criteria

Content moves from Application to Foundation when it:

- Has proven stable over time
- Serves as a building block for other components
- Follows established best practices
- Has been thoroughly tested and validated
