Foundation State

This directory contains stable code, established assets, and core building blocks.

Purpose

- Establish foundational components
- Maintain stable code libraries
- Store core visual identity elements
- Preserve established documentation

When to use Foundation State

- Core libraries that other code depends on
- Essential visual identity elements
- Fundamental concept documentation
- Stable APIs and interfaces

Transition Criteria

Content transitions from Foundation to other states when:

- Major updates are required (moves to Application)
- Conceptual rethinking is needed (moves to Creation)
- Relationship restructuring is necessary (moves to Integration)
